DECLARATION

I hereby declare that the work in this thesis is my own except
for quotation and summaries which have been duly
acknowledged.

Signature : 

Name : MOHAMMAD REDZUAN BIN SAMSURI

Matric No. : UK13025

Date : 28 April 2009

ACKNOWLEDGEMENT

First of all, grateful to God because of my successful work in this research project. I would like to take this opportunity to express my sincere appreciation to my supervisor, Mr liew Hon Jung and my co-supervisor Dr Hii Yii Siang for their continous commitment, patient thought and guide to make this project run in smoothly and successful. Besides that, I would to express my sincere thank to the staff in marine hatchery, Anatomy and Physiology laboratory and also Institutes Aquaculture Tropica (AKUATROP) that help me a lot when I doing my experiment. Thanks also to my heartfelt gratitude go to my friends especially Abdul Rahman, Ainul Shah, Nurul Liayana, Johnny, Amir and Hakim. Thank also to my family for their support and living encouragement as well as the tower of strength in my hour of need. Finally, my appreciation goes to those who have contributed direct or indirect to this project.

ABSTRACT

A feeding experiment was conducted on *Macrobrachium lanchestri* to investigate the acceptability of dietary supplementation with pigmentation and the body pigment enhancement by using natural pigment source. To do this purpose, 400 *M. lanchestri* were devide into eight aquarium. The six aquarium were chooses randomly to fed with two different supplemented diet which is Astaxanthin and purple sweet potato. Another 2 tank of aquarium were fed without supplemented with pigment and served as control. These different diets were fed to the *M. lanchestri* for 8 weeks. After 8 weeks experiment, the food acceptability between 3 different formulated diets has no significantly different. No different in weight gain was found among all prawns. For analysis of body color, the Uv-Vis spectrophotometer had been uses in range of wavelength between 800 nm to 400 nm. The result shown that the shrimp that were fed with purple sweet potato formulated diet have a highest peak compared to other formulated diet. Therefore the purple sweet potato formulated diet can also become a color enhancement for aquatic organism.

ABSTRAK

Satu eksperimen pemakanan telah dilakukan ke atas *Macrobrachium lanchestri* untuk mengkaji penerimaan diet yang ditambah dengan pigmentasi dan peningkatan pigmen badan dengan menggunakan sumber pigmen semulajadi. Bagi menjalankan tujuan ini, 400 *M. lanchestri* telah dibahagikan kepada lapan akuarium. Enam akuarium telah dipilih secara rawak untuk diberi makan dengan dua diet tambahan yang berbeza iaitu Astaxanthin dan ubi keledek ungu. Bagi dua tangki yang lain pula, telah di beri makan tanpa penambahan pigmen diet dan dijadikan sebagai kawalan. Ketiga-tiga diet yang berlainan itu telah diberikan ke pada *M. lanchestri* selama 8 minggu. Selepas lapan minggu menjalankan eksperimen, penerimaan makanan antara 3 jenis formulasi diet yang berbeza itu tidak terdapat perbezaan yang ketara. Tiada perbezaan dalam pertambahan berat untuk semua udang. Bagi analisis badan udang, penggunaan Uv-Vis spektrofotometer telah digunakan pada jarak panjang gelombang 800 nm hingga 400 nm. Keputusan menunjukkan bahawa, udang yang diberi makan diet formulasi yang telah di campur dengan ubi keledek ungu mempunyai puncak penyerapan warna yang tinggi berbanding formulasi diet yang lain. Oleh itu, formulasi diet ubi keledek ungu boleh juga meningkatkan warna untuk organism akuatik.
