**DECLARATION AND VERIFICATION REPORT
 FINAL YEAR RESEARCH PROJECT**

It is hereby declared and verified that this research report entitled:
 ..Incidental catches of marine endangered species in Kuala.....
 ..Terengganu.....
 by ..Nurul Syafiqah Mohammad Hatha, Matric No. UK22256.....
 have been examined and all errors identified have been corrected. This report is
 submitted to the Department of Marine Science as partial fulfilment towards
 obtaining the Degree ..Bach. of Science (Marine Biology)....., Faculty
 of Maritime Studies and Marine Science, Universiti Malaysia Terengganu.

ACKNOWLEDGEMENT

Bismillahirrahmanirrahim,

Firstly, I am very grateful to the Almighty Allah because of His grace and His will that I managed to complete my final year research project. I would express my gratitude my supervisor, Associate Professor Dr Saifullah Arifin bin Jaaman which have given me a lot of consultation throughout the year regarding this project. This project has given me much experience and lessons especially in improving my communication skills.

I also would like to thank my parents and family for giving me moral support, advice and encouragement to me to achieve success in study. Not to forget my friends, Nur Izzati binti Zahari, who have endured in ease and hard time while doing the interview survey, presentation and thesis writing. To my other classmates, thank you for always giving me inspiration and motivation throughout the years we have been together.

Lastly, a great thanks to all the fishermen of Kuala Terengganu that I have interviewed who have helped me and Izzati a lot during the interview session with them.

ABSTRACT

This study was conducted to determine the incidental catch of marine endangered species such as turtles, dolphins, whales, dugongs and whale sharks in Kuala Terengganu waters. This study has three objectives: 1) identify the species of marine mammals, turtles and whale sharks that are caught incidentally in fisheries in Kuala Terengganu waters, 2) investigate the mortality rate of marine mammals, turtles and whale sharks in fisheries according to season in Kuala Terengganu waters, and 3) investigate the mortality rate of marine mammals, turtles and whale sharks according to fishing gear and area in Kuala Terengganu waters. Interviews were conducted from October 2012 to March 2013, and 106 respondents were taken to represent 10% of the number boats registered under the Persatuan Nelayan Kawasan Kuala Terengganu (867 boats). The result shows that the species which caught incidentally in Kuala Terengganu waters are turtles, dolphins, whales and whale sharks. No of incidental catch of dugong is recorded. The frequency of incidental catches of turtles is higher than other marine endangered species in Kuala Terengganu. There is no significant difference in the mortality rate of endangered species during the northeast monsoon season ($df=3$, $p=0.05$). For area factor, there is no significant difference in mortality rate of marine endangered species according to area ($df=3$, $p=0.05$). Among the fishing gears used by fishermen, purse seine recorded the mortality of all marine endangered species except dugongs. Therefore, the development and implementation of conservation strategies such as public awareness program and surveillance authorities plays important roles in reducing the mortality rate of marine endangered species.

Tangkapan Sampingan Spesies Marin yang Terancam di Perairan Kuala Terengganu

ABSTRAK

Kajian ini dijalankan untuk menentukan tangkapan sampingan spesies marin yang terancam seperti penyu, lumba-lumba, paus, dugong dan jerung paus. Kajian ini mempunyai tiga objektif: 1) mengenal pasti spesies mamalia marin, penyu dan jerung paus yang ditangkap secara tidak sengaja dalam perikanan di perairan Kuala Terengganu, 2) menyiasat kadar kematian, penyu di perairan Kuala Terengganu, dan 3) mengkaji kadar kematian mamalia marin, penyu dan jerung paus mengikut peralatan menangkap ikan dan kawasan di perairan Kuala Terengganu. Temu bual telah dijalankan dari Oktober 2012 hingga Mac 2013, dan seramai 106 responden telah ditemu ramah untuk mewakili 10% daripada jumlah bot yang berdaftar di bawah Persatuan Nelayan Kuala Terengganu (867 bot). Keputusan menunjukkan bahawa spesies yang ditangkap secara tidak sengaja di perairan Kuala Terengganu ialah penyu, lumba-lumba, paus dan jerung paus. Tiada tangkapan sampingan bagi dugong yang direkodkan. Kekerapan tangkapan sampingan bagi penyu adalah yang paling tinggi berbanding dengan spesies marin terancam yang lain. Tidak ada perbezaan yang signifikan bagi kadar kematian spesies marin yang terancam ketika musim monsun timur laut ($df=3$, $p>0.05$). Bagi factor kawasan, terdapat perbezaan yang signifikan bagi kadar kematian spesies marin yang terancam mengikut kawasan ($df=3$, $p>0.05$). Pukat jerut mencatatkan kadar kematian daripada semua spesies marin terancam kecuali dugong. Oleh itu, pembangunan dan pelaksanaan strategi pemuliharaan seperti program kesedaran dan pengawasan pihak berkuasa memainkan peranan penting dalam mengurangkan kadar kematian spesies marin yang terancam
