UNIVERSITI MALAYSIA TERENGGANU

PENGAKUAN DAN PENGESAHAN LAPORAN PENYELIDIKAN SFZ 4399 a/b

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk DESIGN AND DEVELOPMENT OF MULTILEVEL CAR PARK SYSTEM oleh KHOR CHUN YEAP no. Matrik UK13279 telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Fizik sebagai memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda Sains Gunaan (Fizik Elektronik & Instrumentasi), Fakulti Sains dan Teknologi, UMT.

Disahkan oleh:

Penyelia Utama

Nama: NOR HAZMIN BINTI SABRI  
Pensyarah  
Jabatan Sains Fizik  
Fakulti Sains dan Teknologi  
Universiti Malaysia Terengganu  
21030 Kuala Terengganu

Tarikh: 28/9/09

.....  
Penyelia Bersama (jika ada)

Nama: WAN HAFIZA BINTI WAN HASSAN  
Pensyarah

## **DECLARATION**

I hereby declare that this thesis entitled Design and Development of Multilevel Car Park System is the result of my own research except as cited in the references.

Signature : 

Name : KHOR CHUN YEAP

Matrix No : UK 13279

Date : 28 APRIL 2009

## **ACKNOWLEDGEMENT**

At the end of my thesis, I would like to thank all those people who made this thesis possible and an enjoyable experience for me.

First of all, I would like to express my gratitude to my supervisor, Pn Nor Hazmin bt Sabri for her support and also always provide guidance and idea for me on programming knowledge. Other than that, I would like to thank to my Co-supervisor as well, Pn Wan Hafiza Wan Hassan for lead and guide me go through all the stages in order to complete my research and thesis.

Besides, I also would like to thank to my PIC training course instructor Mr Hoon Min Siang who experience in this field for sharing his experience and knowledge that he know. Without the training course, I will not be able to have any idea and knowledge on begin my research. And also thanks for your kindness and guidance from time to time for me to complete my research.

Next, to Encik Engku Abd Ghapur Che Engku Ali who was my Final Year Project Coordinator, I would like to express my gratitude and appreciation for your leading and provide related information regarding the paper work of final year project from time to time. Thank again for coordinating this final year project throughout the one whole year.

I would like to thank and appreciate to friends, course mates that giving me support, willingness to help and also did discussion together when I face any problem that was unable to solve.

Lastly, I would like to convey my deepest gratitude to everyone for constant support for me to complete my research.

## **DESIGN AND DEVELOPMENT OF MULTILEVEL CAR PARK SYSTEM**

### **ABSTRACT**

Nowadays, the technologies that currently implemented in multilevel car park system in Malaysia is still left behind compare to other developed countries. Vehicle driver has to travel from level to level in order to search for a parking space. This can cause wastage of time in searching for an empty space and the cost that spent on fuel will increase as well. Besides, vehicle driver also facing the problem in ensuring their privilege in private car park protected. Therefore, in this research, the technology of multilevel car park system was introduced, modified and improved by using low cost and good quality sensors and also create an efficient security system on the same time in order to protect the privilege and safety of vehicle driver in private car park. This system was designed by program the C language into PIC microcontroller chip where this chip acts as a controller of the whole system. As a conclusion, the result of this project was hoped to improve the present technology of multilevel car park system that practiced in Malaysia and also able to be propose and apply in all the multilevel car park in Malaysia so that problems that faced by vehicle driver can be reduced.

## **REKABENTUK DAN PEMBANGUNAN SISTEM PENGURUSAN TEMPAT LETAK KERETA BERTINGKAT**

### **ABSTRAK**

Teknologi sistem pengurusan tempat letak kereta bertenkat di Malaysia yang digunakan pada masa kini masih jauh ketinggalan berbanding di negara lain yang lebih maju. Pemandu terpaksa bergerak dari satu tingkat ke satu tingkat untuk mencari tempat letak kereta yang kosong. Ini akan menyebabkan penggunaan masa yang banyak, seterusnya membawa kepada penggunaan kos yang tinggi di atas penggunaan bahan api kereta. Selain itu, pemandu-pemandu juga menghadapi masalah dalam menjamin hak tempat letak kereta peribadi. Oleh itu, kajian ini mencadangkan suatu teknologi sistem pengurusan tempat letak kereta bertenkat yang diperbaiki dan diubahsuai dengan menggunakan sensor yang kos rendah dan bermutu dan juga sistem keselamatan yang efisien untuk menjamin hak pemandu dalam tempat letak kereta peribadi serta keselamatannya. Sistem ini direka dengan memprogram arahan-arahan tertentu ke dalam cip PIC dengan menggunakan bahasa pengaturcaraan C yang mana cip ini bertindak sebagai pengawal bagi keseluruhan sistem ini. Sebagai kesimpulannya, hasil dari projek ini diharapkan agar dapat membantu meningkatkan kualiti teknologi sistem pengurusan tempat letak kereta yang sedia ada di Malaysia dan dicadangkan untuk digunakan di semua tempat letak kereta bertenkat di Malaysia supaya boleh meningkatkan mutunya dan mengurangkan masalah yang dihadapi pemandu.
