RESEARCH PROJECT FINAL YEAR FINAL DRAFT APPROVAL AND  
VALIDATION FORM I AND II

I certify that the report of this year project entitled as:

**Distribution of Nutrients (nitrate, nitrite, ammonia and ortho-phosphate)  
Content, Primary Productivity and Chlorophyll-*a* in the Merchang River,  
Marang, Terengganu, by Rizwan Bin Nordin, Matric No. UK 11779** has been read  
and all alteration and correction recommended by the examiners have been done. This  
final draft submitted to Marine Science Department has been accepted as fulfillment  
of the requirement for **Bachelor of Science (Marine Science)** under the Faculty of  
Maritime Studies and Marine Science, University Malaysia Terengganu.

Approved by :

Main Supervisor

Name : **PROF. MADYA DR. MOHAMED KAMIL ABDUL RASHID**

## ACKNOWLEDGEMENT

Bismillahirrahmanirrahim...

Alhamdulillah, praise to the Allah, The Most Gracious and Merciful for giving me His blessing and the strength to finish my project until my project finished. First at all, I would like to thank to my supervisor, Associate Prof. Dr. Mohamed Kamil bin Abdul Rashid for his kindness to accept me as his student and also for being generous in teaching all his knowledge and also help me during my project either during sampling or during the data analysis. His knowledge and experience has made my research became clear and success. Secondly, thank you to Dr. Antonina bt. Abdullah and the others lecturer for the advice and supportive comment. I also would like to thank Aida Royyani bt. Abd. Ariff for sharing the knowledge and also for sharing laboratory equipment. Thank also goes to the Oceanography Laboratory (MOSEA) staff for allowing me to use their facilities.

My deep gratitude goes to my family especially my mother and my grandmother, Salmah binti Ismail and Sanah binti Dol for their sacrifice and unconditional love for me until now. Thanks also to all my housemate and friends JayB, Lok, Beduh, Nako, Wan, Jeni, Roy and Indra for their support during my hard days in completing this project. Last but not least, in order not to leave anyone out, thank you to all who were involved directly or indirectly in this project. Thank you so much.

## ABSTRACT

Productivity and nutrient content study in the Merchang River, Terengganu were conducted during the pre-monsoon period (October) and monsoon period (January). Mean nitrate concentration in the surface and bottom water during the first sampling were 1.145 mg/L and 0.792 mg/L respectively while during the second sampling were 0.734 mg/L and 0.689 mg/L respectively. For nitrite, the mean concentration during the first sampling were 0.254 mg/L and 0.221 mg/L respectively while during the second sampling were 0.097 mg/L and 0.072 mg/L respectively. For ammonia the mean concentration during the first sampling were 1.323 mg/L and 0.776 mg/L respectively while during the second sampling were 2.008 mg/L and 2.137 mg/L respectively. For ortho-phosphate, the mean concentration during the first sampling were 0.743 mg/L and 0.436 mg/L respectively while during the second sampling were 0.962 and 0.854 mg/L (0.440 – 1.963 mg/L) respectively. The mean concentration for chlorophyll-a during the first sampling was 0.026 mg/m<sup>3</sup> while for the second sampling was 0.018 mg/m<sup>3</sup>. Mean net productivity for the first sampling was 382.55 mgC/m<sup>3</sup>/hr while for the second sampling was 232.55 mgC/m<sup>3</sup>/hr. There was a good relationship between productivity and nutrient content where increase in productivity will decrease the nutrient content. Nutrient content during the pre-monsoon period was found to be higher than that during the monsoon period. It was also higher during low tide in the surface water. Station near to the cage culture area had higher nutrient content compared to station away from the area. Nutrient can be a limiting factor for

productivity during monsoon period but not during pre-monsoon period. Nutrient distribution in the studied area can be influenced by two major factors, tidal effect and Northeast Monsoon season. Cage culture and agriculture activity in studied area can also be a factor in controlling the nutrient distribution.

## ABSTRAK

Kajian produktiviti dan kandungan nutrien telah dijalankan di Sungai Merchang, Terengganu semasa musim pra-monsun (Oktober) dan pada musim monsun (Januari). Purata kepekatan nitrat dalam air permukaan dan air dasar semasa persampelan pertama ialah 1.145 mg/L dan 0.792 mg/L manakala semasa persampelan kedua kepekatan purata nitrat ialah 0.734 mg/L dan 0.689 mg/L bagi air permukaan dan air dasar. Bagi nitrit, kepekatan purata bagi air permukaan dan dasar pada persampelan pertama ialah 0.254 mg/L dan 0.221 mg/L manakala bagi persampelan kedua ialah 0.097 mg/L dan 0.072 mg/L. Bagi ammonia, kepekatan purata bagi air permukaan dan air dasar semasa persampelan pertama ialah 1.323 mg/L dan 0.766 mg/L manakala bagi persampelan kedua ialah 2.008 mg/L dan 2.137 mg/L. Bagi orto-fosfat, kepekatan purata bagi air permukaan dan air dasar semasa persampelan pertama ialah 0.743 mg/L dan 0.436 mg/L manakal bagi persampelan kedua ialah 0.962 mg/L dan 0.854 mg/L. Purata kepekatan bagi klorofil-a bagi persampelan pertama ialah 0.026 mg/m<sup>3</sup> manakal bagi persampelan kedua ialah 0.018 mg/m<sup>3</sup>. Purata produktiviti pada persampelan pertama ialah 382.55 mgC/m<sup>3</sup>/jam dan bagi persampelan kedua ialah 232.55 mgC/m<sup>3</sup>/jam. Terdapat hubungan yang nyata antara produktiviti dan nutrien di mana peningkatan produktiviti akan merendahkan kepkatan nutrien dalam air. Nutrien amat tinggi semasa sebelum monsun berbanding semasa monsun. Ia turut dipengaruhi oleh pasang surut di mana kepekatan nutrien tinggi semasa air surut. Stesen berhampiran sangkar ikan mempunyai kandungan nutrien yang tinggi berbanding

kawasan yang jauh dari sangkar ikan. Nutrien merupakan faktor penghad bagi produktiviti semasa musim tengkujuh. Taburan nutrien dipengaruhi oleh aktiviti pasang surut air dan monsun timur laut. Sangkar ikan dan aktiviti pertanian di kawasan kajian merupakan elemen yang mengawal taburan dan kandungan nutrien di kawasan kajian.
