DECLARATION AND VERIFICATION REPORT  
FINAL YEAR RESEARCH PROJECT

It is hereby declared and verified that this research report entitled: **Study On The Catamaran Resistance In Calm Water** by **Mohd Farhan bin Kassim**, Matric No. UK 21485 have been examined and all errors identified have been corrected. This report is submitted to the Department of Maritime Technology as partial fulfillment towards obtaining the **Bachelor Degree of Applied Science (Maritime Technology)**, Faculty of Maritime Studies and Marine Science, Unitversiti Malaysia Terengganu.

## **DECLARATION**

I hereby declare that this thesis entitled **STUDY ON THE CATAMARAN RESISTANCE IN CALM WATER** is the result of my own research except as cited in the references.

Date

: 16 JANUARY 2012

## **ACKNOWLEDGEMENTS**

At the end of my thesis, I would like to thanks people that help and supports me with new knowledge and good information to produce this good thesis. I would like to thanks and a lot of appreciation to my supervisor, Dr. Eng. Ahmad Fitriadhy that helps me a lot during this project. The ideas and knowledge given really help me to improve my thesis. The suggestions given really help me and my thesis works smoothly. The information and experience while conducting his final year project was shared with me and improves me better. He helps me a lot by explained the steps of the procedures during handling my thesis.

I would like to thank all my friends especially Siti Nurfarahin to help me during the thesis writing and not forgotten, Khairun Naim, Syed Mohd Faizal and Abdul Halim which accompanies me to completing my thesis. New that give enjoyable experience was shared together while monitoring this laboratory measurement. Last but not least, my beloved family is really supportive and understanding that always motivates me to finish my thesis. They always be my side and pray for my successful.

## **STUDY ON CATAMARAN RESISTANCE IN CALM WATER**

### **ABSTRACT**

This study will be about the determination of design and simulation of catamaran. Factor that will be focusing is on catamaran resistance based on difference of separation length of hull and based on difference of hull speed. The factors that will be focusing as written will be diminished into few sub topic such as provide a design by refer to the principal particulars of an existing prototype design available in database. Hull form and simulation for resistance also will be a main part of this study. Five scope of study in this research, which are the resistance of catamaran on the parametric studies. Maxsurf and CFD (Ansys) will be the main tools of this study. Maxsurf is used to generate main catamaran hull while CFD (Ansys) is used to simulate the design created in Maxsurf to assess the catamaran resistance and finally based from above brief explanation the study on the catamaran resistance in calm water will be constructed in well ordered form and can be use for others to review.

## **KAJIAN DI ATAS KETAHANAN CATAMARAN DALAM AIR TENANG**

### **ABSTRAK**

Kajian ini tentang penentuan reka bentuk dan simulasi catamaran. Faktor yang akan diberi tumpuan ialah terhadap rintangan catamaran berdasarkan perbezaan panjang pemisahan badan kapal dan berdasarkan perbezaan kelajuan kapal. Faktor-faktor yang akan diberi tumpuan adalah seperti menyediakan reka bentuk kepada butir-butir utama reka bentuk prototaip yang sedia ada dalam pangkalan data. Bentuk badan kapal serta simulasi untuk rintangan juga akan menjadi sebahagian utama kajian ini. Lima skop kajian yang telah perincikan iaitu rintangan catamaran pada kajian parametrik. Maxsurf dan CFD (ANSYS) akan menjadi alat utama kajian ini. Maxsurf digunakan untuk menjana badan kapal catamaran utama manakala CFD (ANSYS) digunakan untuk reka bentuk yang dicipta dalam Maxsurf menilai rintangan catamaran dan akhirnya berdasarkan dari atas penjelasan ringkas kajian mengenai rintangan catamaran dalam air tenang akan dibina dalam bentuk yang baik dan boleh digunakan untuk orang lain untuk di kaji.
