ACKNOWLEDGEMENTS

I am very grateful to all my friends for their support, patience and assistance with the English language. Thanks for sharing the most valuable ideas with me. I am blessed to have you all here.

I wish to thank my mum, my brothers and my sisters for their support, caring and loving encouragement as well as tower of strength in my hour of needs.

I also would like to thank my supervisor, Associate Professor Dr. Kamaruzzaman Bin Hj. Yunus for his guidance and support throughout the project. I really appreciate his encouragement and exposed me to this great research. I am fortunate to be able experience the research work. Thanks to Dr. Antonina Abdullah as my coordinator for final year project and the manuscript and giving advice on the text.

Very thank full to my course mates, diey, syae, ija, hazren, amri, razif, nande and syalindran for helping me in the analysis. My big appreciation also to my seniors (Waq, Willy and Ong) for the guidance and criticisms during lab works and the preparation of this thesis. For sure, never forget how guys pulled my leg twice. It is great to know and have you guys here. Not forgetting to my fantastic and best friend (bro ajae7) for giving me his moral support while doing this thesis.

I would also like to express my deep appreciation to the lab assistants of Oceanography Laboratory (En. Kamari, En. Kamarun, En. Raja and En. Sulaiman) for allowing me to use the apparatus and instruments inside for my experiments.

Thank you very much.

ABSTRAK

Satu kajian mengenai taburan elemen-elemen kimia di Sungai Marang, Ibai dan Merang, Terengganu. Nilai purata bagi kepekatan logam Al bagi Sungai Marang ialah 4.525 ± 3.22 $\mu\text{g/g}$, kepekatan Mn ialah 2.11 ± 123.75 $\mu\text{g/g}$, kepekatan Co 85.84 ± 11.16 $\mu\text{g/g}$, kepekatan Cu 74.789 ± 29.7 $\mu\text{g/g}$ dan kepekatan Cr ialah 155.87 ± 45.47 $\mu\text{g/g}$. Bagi Sungai Ibai pula, kepekatan Al ialah 4.91 ± 2.45 $\mu\text{g/g}$, kepekatan Mn ialah 273.4711 ± 218.81 $\mu\text{g/g}$, kepekatan Co 91.04 ± 21.34 $\mu\text{g/g}$, kepekatan Cu 121.94 ± 187.65 $\mu\text{g/g}$ dan kepekatan Cr ialah 143.80 ± 37.99 $\mu\text{g/g}$. Manakala Sungai Merang pula berkepekatan Al dengan 1.15 ± 1.51 $\mu\text{g/g}$, kepekatan Mn ialah 116.69 ± 124.59 $\mu\text{g/g}$, kepekatan Co 88.74 ± 17.01 $\mu\text{g/g}$, kepekatan Cu 85.45 ± 81.24 $\mu\text{g/g}$ dan kepekatan Cr ialah 95.96 ± 26.28 $\mu\text{g/g}$. Normalisasi Al terhadap Mn, Co, Cu dan Cr menunjukkan taburan elemen-elemen kimia dalam ketiga-tiga sungai adalah berasal daripada sumber antropogenik iaitu daripada aktiviti manusia. Ini dapat dibuktikan daripada nilai EF yang diperolehi. Parameter fizikal menunjukkan perubahan yang sedikit di antara stations. Sedimen Ibai didapati lebih halus dari sedimen Marang dan Merang. Purata min saiz ialah 1.84 ± 0.78 , $\bar{\phi} 0.88 \pm 0.69$ $\bar{\phi}$ dan $1.249 \pm 0.47 \bar{\phi}$. Purata kandungan organik bagi Marang, Ibai dan Merang ialah 1.90 ± 0.11 , 1.92 ± 0.09 dan 1.97 ± 0.11 . Perhubungan antara min saiz partikel dan karbon organik bagi ketiga-tiga sungai ini adalah sangat lemah dan boleh diabaikan.

ABSTRACT

A study on the distribution of Al, Mn, Co, Cu Cr around Marang, Ibai and Merang rivers of Terengganu were determined. The average concentration of Al from Marang sediment is $4.525\pm3.22\%$, for Mn $2.11\pm123.75 \mu\text{g/g}$, for Co $85.84\pm11.16 \mu\text{g/g}$, for Cu $74.789\pm29.7 \mu\text{g/g}$ and for Cr is $155.87\pm45.47 \mu\text{g/g}$. For Ibai sediment, Al concentration is $4.91\pm2.45\%$, Mn is $273.4711\pm218.81 \mu\text{g/g}$, Co $91.04\pm21.34 \mu\text{g/g}$, Cu $121.94\pm187.65 \mu\text{g/g}$ and Cr is $143.80\pm37.99 \mu\text{g/g}$. Meanwhile, the Merang sediment for Al is $1.15\pm1.51 \mu\text{g/g}$, Mn is $116.69\pm124.59 \mu\text{g/g}$, Co $88.74\pm17.01 \mu\text{g/g}$, Cu $85.45\pm81.24 \mu\text{g/g}$ and Cr is $95.96\pm26.28 \mu\text{g/g}$. The normalization of Al against Mn, Co, Cu and Cr showed that the distribution of these chemical element from the sediment were greatly affected by antrophogenic effects. This can be proven by EF value obtained. Physical parameter showed minor difference amongst stations. Sediments size from Ibai were smaller compared to Marang and Merang. The mean average of the particle size is 1.84 ± 0.78 , Ø 0.88 ± 0.69 Ø and $1.249\pm0.47\text{Ø}$. The average organic content for Marang, Ibai and Merang is 1.90 ± 0.11 , 1.92 ± 0.09 dan 1.97 ± 0.11 . The relationship between mean size and organic carbon for all three rivers are so weak and negligible.
