PENGAKUAN DAN PENGESAHAN LAPORAN
PROJEK PENYELIDIKAN I DAN II

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk: PROPER ADJUVANT SELECTION FOR TANK MIXTURE OF TRICLOPYR AND METSULFURON ON CONTROL OF *Hedyotis verticillata* (L.) oleh Anne Marie Kaben, no. matrik: UK 8177 telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda Sains (Sains Biologi), Fakulti Sains dan Teknologi, Kolej Universiti Sains dan Teknologi Malaysia.

ACKNOWLEDGEMENT

It is great pleasure to be able to put on record for my deep gratitude and appreciation to all who support and help me in doing this final year project. First of all, I would like to express my deepest appreciation and thankful to supervisors, Dr Cha Thye San for giving me support and advice and Dr Chuah Tse Seng, my second supervisor for his guidance, supervision, support, and patience throughout this study.

I am also want to thanks all lab assistant of Biology department for their help and shared knowledge before starting and during my study.

Special appreciations to my family parents, sisters, brother, and brothers in law for their love, support, encouragement and understanding through out my three years study in KUSTEM.

With this opportunity, I would like to thank all my friends especially my teammates, Asmah, Suganthi, Franci, and Shirley for all their helps and shared opinion during running the experiment. Also to my housemates and my costmates for all the good time we had together.

ABSTRACT

A study was conducted to determine the proper adjuvant selection among non-ionic surfactant (NIS), crop-oil concentrates (COC), and organosilicon (OS) for tank mixture of metsulfuron and triclopyr on control of *Hedyotis verticillata* Lam. under glasshouse and field conditions. The results of glasshouse study showed that tank mixture rate of 0.1 g a.i./ha metsulfuron plus 80 g a.i./ha triclopyr, 0.2 g a.i./ha metsulfuron plus 160 g a.i./ha triclopyr, 0.4 g a.i./ha metsulforon plus 320 g a.i./ha triclopyr, and 0.8 g a.i./ha metsulfuron plus 640 g a.i./ha triclopyr with the addition of 0.25% NIS, 0.05% COC or 0.05% OS were effective on control of *H. verticillata* with organosilicon as the most effective adjuvant. In the fields, however, only treatment of 0.2 g a.i./ha metsulfuron plus 160 g a.i./ha triclopyr added with 0.25% NIS and 0.4 g a.i./ha metsulfuron plus 320 g a.i./ha triclopyr with the addition of 0.25%NIS, 0.05% COC, and 0.05% OS were good in controlling *H. verticillata*. However, it is suggested that the most cost-effective treatment on control *H. verticillata* is 0.2 g a.i./ha metsulfuron plus 160 g a.i./ha triclopyr with the addition of 0.25%NIS.

**PEMILIHAN ADJUVANT YANG SESUAI UNTUK KOMBINASI
METSULFURON DAN TRIKLOPIR DALAM PENGAWALAN *Hedyotis*
verticillata Lam**

ABSTRAK

Satu kajian telah dijalankan bagi menentukan pemilihan adjuvant yang sesuai di antara non ionic surfactant (NIS), crop-oil concentrates (COC), dan organosilikon (OS) untuk kombinasi racun herba metsulfuron dan triklopir dalam pengawalan *Hedyotis verticillata* Lam. di bawah keadaan rumah kaca dan lapangan. Keputusan kajian rumah kaca menunjukkan bahawa kombinasi metsulfuron dan triklopir pada kadar 0.1 g a.i/ha metsulfuron dengan triklopir 80 g a.i/ha, 0.2 g a.i/ha metsulfuron dengan 160 g a.i/ha triklopir, 0.4 g a.i/ha metsulfuron dengan 320 g a.i/ha g a.i/ha triklopir, dan 0.8 g a.i/ha metsulfuron dengan 640 g a.i/ha triklopir dengan penambahan 0.25% NIS, 0.05% COC, dan 0.05% OS adalah berkesan dalam pengawalan *H. verticillata*, di mana organosilikon ialah adjuvant yang paling efektif. Walau bagaimanapun, bagi kajian di lapangan, hanya rawatan dengan 0.2 g a.i/ha metsulfuron dengan 160 g a.i/ha triklopir ditambah dengan 0.25% NIS, 0.4 g a.i/ha metsulfuron dengan 320 g a.i/ha triklopir ditambah dengan 0.25%NIS, 0.05%COC, dan 0.05% OS adalah baik untuk mengawal *H. verticillata*. Adalah dicadangkan bahawa rawatan yang paling kos-efektif untuk mengawal *H. verticillata* ialah 0.2 g a.i/ha metsulfuron tambah 160 g a.i/ha g a.i/ha dengan tambahan 0.25% NIS.
