PROJEK PENYELIDIKAN I DAN II**

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk:  
SQUAMATA (ANIMALIA: REPTILIA) IN THE PET TRADE IN PENINSULAR MALAYSIA oleh  
Maximilian Tariq Conrad no. matrik: UK 8092 telah diperiksa dan semua pembetulan yang  
disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai  
memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda Sains -  
Pemuliharaan dan Pengurusan Biodiversiti Fakulti Sains dan Teknologi, Kolej Universiti  
Sains dan Teknologi Malaysia.

## ACKNOWLEDGEMENTS

First and foremost, I would like to thank God Almighty for giving me the chance and strength needed in doing and finishing this study. I would also like to take this chance to thank;

- En. Amirrudin Ahmad, my supervisor, for helping and guiding me through this long ordeal. Thank you Sir for your patients and knowledge
- Josil P. Murray, my partner and comrade, for guiding and supporting me and making sure everything went smoothly and as planned. You helped show me the way and if it wasn't for you, I do not think I would have been able to accomplish what I have done today. Thank you for bearing with me
- Chris R. Shepherd from TRAFFIC and Ahmad Zafir Abdul Wahab from WWF for bringing me into the world of the pet trade. If it wasn't for the two of you, I would not even know where to start with this research
- My fellow housemates; Din, Eri, Konaz and Frankie. Thanks for being there when I needed you all and thank you for accompanying me through the long nights in front of the computer
- My mother and sister for your love and care
- Anyone who has helped me directly or indirectly in doing my research

MUCHAS GRACIAS, DANKE SCHON, MERCI, TERIMA KASIH & THANK YOU!

## ABSTRACT

The pet trade is defined as the buying and selling of animals as pets. Squamatas have a growing market in the Peninsular Malaysian pet trade. This study surveys the snakes and lizards available in pet and aquarium shops in Penang Island, Ipoh, Johor Bahru and Kuala Lumpur. Informal interviews and visual surveys was conducted. A total of 22 pet shops out of 88 had at least one squamata species. A total of 107 individuals from 33 species of snakes and 438 individuals from 24 species of lizards were recorded throughout the survey. Kuala Lumpur had the highest number of squamata with 323 individuals (60.37%) and 41 species (60.29%) while Ipoh had the lowest with 31 individuals (8.78%) and 4 species (5.88%). Kuala Lumpur also recorded the highest in price range. The most expensive species recorded in the pet trade was an Albino Reticulated Python (*Python reticulatus*) with RM 23,000.00 for one individual. The most abundant species found for snakes was the Burmese Python (*Python molurus bivittatus*) with 34 (31.78%) individuals and for lizards was the Green Iguana (*Iguana iguana*) with 347 (79.22%). Not enough coverage in PERHILITAN, CITES and IUCN is done on these squamata species. More effort should be done by local authorities, international organizations and the general public to help control and manage the pet trade and its effects.

# SQUAMATA (ANIMALIA:REPTILIA) DALAM PERDAGANGAN HAIWAN PELIHARAAN DI SEMENANJUNG MALAYSIA.

## ABSTRAK

Perdagangan haiwan peliharaan boleh didefinisikan sebagai jual beli haiwan untuk dipelihara. Kajian ini mengambil kira squamata yang terdapat di kedai haiwan dan akuarium di Pulau Pinang, Ipoh, Johor Bahru dan Kuala Lumpur. Sejumlah 22 daripada 88 kedai haiwan yang dilawati mempunyai spesies squamata. Terdapat 107 individu dari 33 spesies ular dan 438 individu dari 24 spesies cicak yang dijumpai semasa kajian. Kuala Lumpur mempunyai bilangan squamata tertinggi dengan 323 individu (60.37%) dan 41 spesies (60.29%) manakala Ipoh adalah yang terendah dengan 31 individu (8.78%) dan 4 spesies (5.88%). Kuala Lumpur telah merakamkan julat harga tertinggi bagi squamata. Spesies termahal yang dijumpai adalah Ular Sawa Batik albino (*Python reticulatus*) dengan harga RM 23,000.00 seekor. Spesies ular yang paling banyak ditemui adalah Ular Sawa Burma (*Python molurus bivittatus*) dengan 34 (31.78%) individu manakala bagi cicak pula Iguana Hijau (*Iguana iguana*) paling banyak ditemui dengan 347 individu (79.22%). PERHILITAN, CITES dan IUCN kurang memberi tumpuan dan tekanan kepada spesies-spesies squamata ini. Pihak kerajaan, organisasi antarabangsa dan juga rakyat setempat harus lebih mengambil berat dan melebihkan usaha untuk mengawal dan mengurus perdagangan ini.
