ACKNOWLEDGEMENTS

I take this opportunity to express a deep sense of gratitude to my research guide, Dr. Aziz Ahmad for his constant encouragement, sustained interest and parental care throughout the course of this investigation. My sincere thanks are due to representative of Dr. Ahmad Shamsuddin; Mr. Zaidad for his invaluable help, timely suggestions friendly nature and kind patience shown by him whom helped me a lot in completing this work. I deeply appreciate Professor Madya Dr. Mohd Effendy b. Abd Wahid and Kak Uda for their timely help, by providing me the facilities to use inverted microscope.

I would like to convey my sincere thanks to Pn. Zarina, Pn. Mahidawati, Cik. Norazlina and Cik Ku Naiza and all the lab staffs for their help and caring nature.

I shall also remember joyful moments shared with my dear friend Sandra Catherine Zainathan for providing endless help and support whenever I am depressed and tensed up. Special thanks also due to my friends P. Tanesh, K. Yoga, B. Thamu, S. Sivagamy, K. Suganthi and K. Murugan who gave me moral support and encouragement. I am greatly indebted to my friends and everything we ever experienced together, will never be forgotten.

No words can suffice the encouragement and moral support rendered by my dear parents and family members, without their scarification and persistent motivation this work would not have been possible.

LIST OF ABBREVIATION

ATP	-	Adenosine triphosphate
AAB	-	Acetic acid bacteria
bp	-	Base pair
CPS	-	Capsular Polysaccharides
CO ₂	-	Carbon dioxide
CH ₂ O	-	Aldehyde
C:N	-	Carbon ratio Nitrogen
CaCO ₃	-	Calcium carbonate
DNA	-	Deoxyribonucleic acid
DOS	-	Disk operating system
DTP	-	Dihydronopterin triphosphate pyrophosphatase
TDP	-	Thiamine triphosphatase
EPS	-	Exopolysaccharides
GalU	-	UDP-glucose pyrophosphorylase
g	-	Gram
g/l	-	Gram per Litter
HoPS	-	Homopolysaccharides
HePS	-	Heteropolysaccharides
HCl	-	Acid hydrochloric
H ₂ S	-	Hydrogen sulphide
H ₂ O	-	Water
H ₂ O ₂	-	Hydrogen dioxide,
H ₂ S	-	Hydrogen sulphide

h	-	Hour
ID	-	Identity
kcal	-	Kilocalorie
kb	-	kilo base
K ₂ HPO ₄	-	Dipottassium hydrogen orthophosphate
LPS	-	Lipopolsaccharides
LAB	-	Lactic acid bacteria
ml	-	Milliliter
min	-	Minute
M	-	Molar
mm	-	Millimeter
Mg	-	mille gram
NaCl	-	Sodium chloride
NaOH	-	Sodium hydroxide
nm	-	Nano meter
NAD (P) ⁺	-	Nicotinamide adenine dinucleotide phosphate
O ₂	-	Oxygen
O/F	-	Oxidation/Fermentation
PTS	-	Phosphotransferase system
PEP	-	Phosphoenolpyruvet
PQQ	-	Pyrroloquinolinquinone
PC	-	Paper chromatography
PIBWIn	-	Probiotic Identification of Bacteria for Windows
R _f	-	Retention factors
RfbA	-	dTDP-glucose pyrophosphorylase

rpm	-	rotation per minute
rRNA	-	Ribosomal RNA
S	-	Sulphur
TFA	-	Trifluoroacetic acid
UDP	-	Uridine diphosphate
UTI	-	Urinary tract infection
v/v	-	volume/volume
WPS	-	Cell wall polysaccharide
α -PGM	-	α -phosphoglucomutase
μ m	-	Micrometer
α	-	Alpha
β	-	Beta
$^{\circ}$ C	-	Degree Centigrade
δ	-	Delta
ϵ	-	Epsilon
ΔG	-	Free enthalpy
γ	-	Gamma
μ l	-	Micro litter
%	-	Percentage

LIST OF APPENDICES

Appendix		Page
Appendix 1	Characteristics of isolate 01, 02, 05 and 08	65
Appendix 2	Different morphologies of isolates	66
Appendix 3	Growth of isolates in different selective medium	67
Appendix 4	Isolate that have been cultured in broth in order to obtain polysaccharide	69
Appendix 5	Crude polysaccharide can be found right after filtered supernatant precipitated with 2volume of 95% of alcohol.	70
Appendix 6	The process of Freeze drying and the dried polysaccharide	71
Appendix 7	The result that given by PIBWIn for species identification	73

ABSTRACT

An experiment was conducted to isolate and to identify the polysaccharide producing bacteria in Malay-traditional medicine. The medicine broth was spread in nutrient agar in order to obtain bacterial culture. Obtained bacterial cultures were characterized via series of morphological and biochemical test. A total of 14 isolates were obtained and all was characterized until genus level. All the isolated bacteria were characterized as *Bacillus* sp. A total of 10 isolates were further characterized until the suspected species level by using PIBWIn software. Isolate 01, 02 and 09 were suspected as *Bacillus subtilis* ssp. *subtilis*; Isolate 03, 04, 06, and 07 were suspected as *Bacillus pumilis* and isolate 08 and 10 were suspected as *Bacillus coagulans* and *Bacillus lincheniformis* respectively. Five strains were found to produce exo-polysaccharide. Species of monosaccharide present in exo-polysaccharide were purified and identified using paper chromatography method. The sugar was separated by using ethyl acetate: acetic acid: formic acid: water (18:3:1:4, v/v) as a top solvent for 18hr. Lactose, raffinose, maltose, trehalose, galactose, glucose, mannose, arabinose, xylose and rhamnose are the species of monosaccharides that have presence in exo-polysaccharide of isolated bacteria.

ABSTRAK

Suatu eksperimen telah dijalankan untuk menghasilkan polisakarida daripada bakteria yang diperolehi daripada ubat tradisi melayu. Larutan perubatan telah disebarluaskan dalam agar nutrisi untuk mendapatkan kultur bakteria. Kultur bakteria yang diperolehi telah dicirikan melalui satu siri ujian morfologi dan biokimia. Sejumlah 14 pencilan telah diperolehi dan dikenalpasti sehingga ke peringkat genus. Semua bakteria dicirikan sebagai genus *Bacillus* sp. Sejumlah 10 pencilan dicirikandengan lebih lanjut sehingga tahap spesis menggunakan perisian PIBWIn. Pencilan 01, 02, dan 09 dijangka sebagai *Bacillus subtilis* ssp. *subtilis*; pencilan 03, 04, 06, and 07 pula dijangka sebagai *Bacillus pumilis* dan pencilan 08 dan 10, masing-masing dijangka sebagai *Bacillus coagulans* dan *Bacillus lincheniformis*. Lima strain didapati menghasilkan ekso-polisakarida. Spesis monosakarida yang terdapat dalam ekso-polisakarida dikenalpastikan dengan menggunakan kaedah kromatografi kertas. Gula yang terdapat dalam eksopolisakarida tersebut dipisahkan dengan menggunakan etil asitat: asetik asid: asid formik: air (18:3:1:4, v/v). Laktosa, rafinosa, maltosa, trihalosa, galaktosa, glukosa, mannosa arabinosa, zilosa dan ramnosa adalah spesis monosakarida yang hadir dalam eksopolisakarida bakteria yang telah dipencil.
