RESEARCH REPORT VERIFICATION**

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk: Isolation and Identification of fungi associated with *Nypa fruticans* in Setiu Wetlands oleh Ros Azian Bt Mohd Azman, no. matrik: UK12484 telah diperiksa dan semua pembetulan yang disarankan oleh Dr. Mariam bt Taib telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda Sains (Sains Biologi), Fakulti Sains dan Teknologi, Universiti Terengganu Malaysia.

DECLARATION

I hereby declare that this thesis entitled Isolation and Identification of fungi associated with *Nypa fruticans* at Setiu Wetlands, Terengganu is the result of my own research except as cited in the references.

Signature	:	
Name	:	Ros Azian bt Mohd Azman
Matric No	:	UK 12484
Date	:	14/05/08

ACKNOWLEDGEMENTS

In the name of Allah S.W.T The Most Beneficent and The Most merciful. The deepest sense of gratitude to the Almighty for the strength and ability to complete this project.

I would like to take this opportunity to express my gratitude towards my supervisor Dr. Mariam Taib, Microbiology Lab Assistants Mdm. Mahidawati binti Mamat for their guidance, advice, and understanding during my final year project. Infinite thanks I brace upon them.

I would also like to express my deepest appreciation to my colleagues, lecturers, friends especially Miss Noor Afiza binti Badaluddin for her help in my second sampling at Setiu Wetlands.

Also thanks and appreciation to my project group members; Faezah, Latifah, Prema and Nithiyaa for their help during my lab work. Not forgetting my beloved friends Wahida, Baizura and especially Husna for their willingness on helping me in various ways no matter day or night with all the difficulties I faced.

Last but not least, I would like to express my appreciation to my family members especially to both my parents Pn Rosmawati binti Mohd Nassim and En Mohd Azman bin Ismail for their support physically, mentally and spiritually.

Finally to all individuals involved either directly or indirectly in the succession of this thesis. Without them, this project cannot be successfully completed.

ABSTRACT

Fungi are the most diverse organisms where marine fungi have been proven to produce bioactive compounds. This study was carried out to isolate and identify the fungi associated with *Nypa fruticans* at Setiu Wetlands, Terengganu. Two techniques were used which were Direct Plating Technique and Damp Incubation Technique. Fragments of leaves, stems, roots and fruits were cultured on PDA and identification was done using the slide culture technique. The results showed that more fungi appeared using the Direct Plating technique where there are 15 different isolates compared to six species isolated from Damp Incubation Technique. The fungi identified include four Ascomycetes and one each for Hypomycetes, Protosteliomycetes, Coelomycetes, Zygomycetes and Deuteromycetes, with 12 isolates unidentified. Out of 21 total of isolated fungi, only nine of them were able to be identified. These fungal isolates can be used further in the investigation of possible bioactive compound(s) produced by these fungi.

PEMENCILAN DAN IDENTIFIKASI KULAT YANG BERASOSIASI DENGAN POKOK NYPA FRUTICANS DI SETIU WETLANDS, TERENGGANU

ABSTRAK

Fungi merupakan organisma yang mempunyai diversiti yang tinggi di mana fungi marin telah terbukti dapat menghasilkan sebatian bioaktif. Kajian di Setiu Wetlands, Terengganu ini bertujuan untuk memencil dan mengenalpasti fungi yang berasosiasi dengan *Nypa fruticans*. Dua teknik yang terlibat adalah “Direct Plating Technique” dan “Damp Incubation Technique”. Bahagian seperti daun, batang, akar dan buah dikulturkan di atas PDA dan dikenalpasti melalui teknik kultur slaid. Keputusan menunjukkan lebih banyak fungi didapati dari “Direct Plating Technique” di mana 15 fungi telah dipencarkan berbanding hanya enam dari “Damp Incubation Technique”. Fungi yang telah dikenalpasti termasuklah empat spesis dari Ascomycetes, dan hanya satu dari setiap Hypomycetes, Protostelomycetes, Coelomycetes, Zygomycetes, dan Deuteromycetes manakala 12 spesis tidak dikenalpasti. Daripada 21 spesis fungi yang dipencarkan, hanya sembilan daripadanya telah dikenalpasti. Penciran fungi ini boleh digunakan seterusnya dalam kajian penghasilan sebatian bioaktif yang mungkin dihasilkan oleh fungi-fungi ini.
