APPROVAL FORM

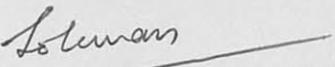

The undersigned certify that they have read and
commend to the Faculty of Fisheries and Marine
Science, for the acceptance, a research project
report entitled :

PRIMARY PRODUCTIVITY STUDY : DIURNAL VARIATION
IN PHOTOSYNTHETIC VALUES AND INORGANIC NUTRIENT
CONTENTS OF SUNGAI MANIR AND SUNGAI IBAI,
TRENGGANU WITHIN A GIVEN TIDAL CYCLE.

Submitted by :

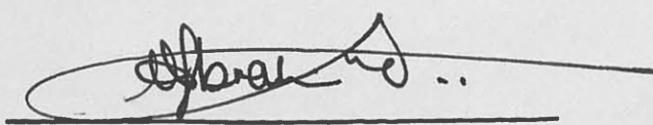

MOHD. KHAIRUDDIN BIN ABU BAKAR

in partial fulfilment of the requirement for the
Degree of Bachelor of Science (Fisheries).

Universiti Pertanian Malaysia.
Committee for Research Project.

Date : 1/4/83

ACKNOWLEDGEMENT

I am greatly indebted to my supervisor, Encik Lokman Hj. Shamsudin, Faculty of Fisheries and Marine Science, Universiti Pertanian Malaysia for his invaluable guidance, advice and suggestions throughout the course of the study.

I would like to thank Encik Razali Nasir, Encik Khaizam Othman and Encik Engku Indong Engku Embong, for assisting me during the project.

Finally, I would like to express my deep gratitude to my parents whose never failing encouragement and sacrifices have been a major inspiration throughout my years of study.

ABSTRAK

Satu kajian nilai fotosintesis, kandungan nutrien bukan organan dan faktor-faktor alam sekitar yang berkaitan telah dijalankan di Sungai Ibai dan Sungai Manir, Trengganu dalam masa lingkaran air pasang-surut.

Perbezaan harian dalam nilai fotosintesis bersih dan kandungan nutrien bukan organan telah didapati di kedua-dua stesyen dalam masa lingkaran air pasang-surut. Daripada kajian yang telah dijalankan, didapati bahawa kandungan bukan organan dan nilai fotosintesis bersih adalah tinggi semasa air surut dan sebaliknya rendah sewaktu air pasang di kedua-dua stesyen. Tambahan lagi, kajian profil dalam ke atas fotosintesis bersih, nitrojen ammonium dan nitrojen nitrit di kedua-dua sungai menunjukkan penurunan nilai mereka mengikut kedalaman pada mana-mana masa yang ditetapkan.

- Kenaikan nilai kemasinan dan pH mengikut kedalaman semasa air pasang di kedua-dua sungai menunjukkan berlakunya kemasukan air laut daripada

Laut China Selatan ke dalam muara sungai. Kandungan nitrojen ammonium adalah tinggi berbanding dengan nitrojen nitrat di mana ini menunjukkan peningkatan proses pereputan dan mineralisasi dalam kedua-dua sungai tersebut.

Low, Intermediate, and High Tides at Sungai Melaka and Sungai

A diurnal variation in net photosynthetic values and inorganic nitrogen contents were observable at both stations within a tidal cycle. The present finding shows that the inorganic nitrogen contents and net photosynthetic values were found to be relatively high during the low tides and vice-versa during high tide at both stations. Furthermore, depth profile studies of net photosynthesis, ammonium nitrogen and nitrate nitrogen at both rivers demonstrated a decrease in their values with depth at any given station.

Increases in values of salinity and pH with depth especially during high tides at both rivers indicate an intrusion or seepage from the open South China Sea into the river-mouth. Ammonium nitrogen content was relatively higher than the con-

ABSTRACT

A study on photosynthetic values, inorganic nutrient contents and the related environmental factors was conducted at Sungai Manir and Sungai Ibai, Trengganu within a tidal cycle.

A diurnal variation in net photosynthetic values and inorganic nutrient contents were observable at both stations within a tidal cycle. The present finding shows that the inorganic contents and net photosynthetic values were found to be relatively high during the low tides and vice-versa during high tide at both stations. Furthermore, depth profile studies of net photosynthesis, ammonium nitrogen and nitrite nitrogen at both rivers demonstrated a decrease in their values with depth at any given times.

Increase in values of salinity and pH with depth especially during high tides at both rivers indicate an intrusion of seawater from the open South China Sea into the river-mouth. Ammonium nitrogen content was relatively higher than that

of nitrate nitrogen indicating an increased process of decomposition and mineralisation in the rivers.

ABSTRACT	1.1.1
ABSTRACT	1.1.2
TABLE OF CONTENTS	1.1.3
LIST OF TABLES	1.1.4
LIST OF FIGURES	1.1.5
LIST OF APPENDICES	1.1.6
1.2 : INTRODUCTION	
1.2.1 : Importance of the study	1.2.1
1.2.2 : Definition of primary productivity	1.2.2
1.2.3 : Oxygen production relation for photosynthetic value	1.2.3
1.2.4 : Inorganic nutrients	1.2.4
1.2.5 : Objectives of the study	1.2.5
1.2.5.1 : Main objective	1.2.5.1
1.2.5.2 : Specific objectives	1.2.5.2
1.3 : METHODOLOGY	
1.3.1 : Location of study	1.3.1
1.3.2 : Sampling technique	1.3.2
1.3.3 : Determination of parameters	1.3.3
1.3.3.1 : Determination of oxygen production in sample	1.3.3.1
1.3.3.2 : Determination of sediment	1.3.3.2
1.3.3.3 : Determination of sediment	1.3.3.3
1.3.3.4 : Determination of phosphorus	1.3.3.4
